Proxe haa Tavasot ee Rexim ee Jomhur iye Eslaam i Iran Dozdid ee Shod ee Amaa Pas Az Bargardaandan ee Laptop Va Etelaa'aat Va Tajhizaat KHodam, 2 Proxe ye MrSanad(Qesmat ee Front Va Backend) Va Exchange Raa Tori Eslaah Kardam Ke Natavaanad Kaar ee Digar i Anjaam Dehand Va Be Ein Tartib Adam ee Mashru'eiyat ee Rexim Va Afraad ee Aan Raa Ashkaar Kardam. GitiApp, GK-Project, GK-Admin, SGPPlus Android Raa Ham Hazf Karde and.	All apps and programs are written by me, except for the ones I have written. Some works that are not in Pdf are available in Twitter(X) Or FaceBook (FB) account. Some images of apps and programs are not up to date due to updates or the end of cooperation. The wording in the Persian section has been entirely designed by myself. The projects were stolen by the Islamic Republic of Iran regime, but after returning my laptop, equipment, and information, I modified the two projects MrSanad (Qesmat ee Backend Va Front) and Exchange so that they could not do anything else, thus exposing the illegitimacy of the regime and its people. GitiApp, GK-Project, GK-Admin, SGPPlus Android projects have also been removed.

AASHPAZ I BAA DR.AASHPAZ	COOKING WITH DR.CHEF

SGPPLUS

The employee panel of Giti Pasand provides employees with access to detailed information about their monthly salaries and their entry and exit records. Initially, this data was retrieved through SQL queries, but after I submitted the source code to the company, they modified it and began sending the data to me via a web service in XML format for processing and display. (When you find yourself in such a situation, anything you do is either copied by others, or they will destroy your life by following your methods.)

Employees can also view company news and events. In the upgraded version of the web system, I added features such as commenting on news, liking/disliking posts, and reacting to other employees' comments. The survey section was designed in a way that allows the creation of any type of question based on analysis and database design. Additionally, in the upgraded web version, I expanded the company's meal program. The database and web service were designed so that meal-related data and other sections were first entered into the database via BPMS and then displayed in the web panel, where employees could rate the meals and submit their feedback. I also enabled the like/dislike feature for other users' comments about the meals. Besides these features, employees also had access to contracted shopping centers, allowing them to view a list of stores and businesses that had contracts

Nazar haaye Digaraan Darbaare yee Qazaa Niz Faraaham Kard am. Poroxe Tahvil Daad e Shod e Amaa Ejraa ei Nashod e Ast. **Saal ee Ejraa: 1402 KH-I**	An upgraded version of the MrSanad application has been developed, with the key difference being that this version runs on IIS and offers improved performance and speed compared to the desktop version of MrSanad. Additionally, in this version, users do not need any special knowledge to update the application. After an update, the program is automatically copied to the server folder where IIS is running and then started automatically. Furthermore, I have added an accounting module, allowing users to record their buy and sales. In this version, I tried to avoid using jQuery and wrote the application in JavaScript, similar to how it would be written using the Angular framework. The project has been delivered, but it has not been executed successfully. **Implementation year: 2022-2023 CNEA**
